Preliminary Amendment Dated ____

LISTING OF CLAIMS

Claims 1-22 (Canceled)

23. (Currently Amended) An apparatus comprising:

a manipulandum movable in at least one degree of freedom;

a sensor ~~operative~~ operable to detect ~~the motion~~ a position of said manipulandum and a deviation of said manipulandum from said position and to output a first sensor signal ~~that correlates associated~~ with ~~a detected motion~~ said deviation of said manipulandum from said position;

an actuator ~~operative~~ operable to provide tactile feedback to said manipulandum that correlates associated with ~~the~~ said first sensor signal; and

a ~~wireless communication interface operative to communicate with a host~~ first processor operable to control said actuator and to receive said first sensor signal from said sensor.

24. (Previously Amended) An apparatus as recited in claim 23 wherein said manipulandum comprises a roller.

25. (Currently Amended) An apparatus as recited in claim 24 wherein said roller communicates an electrical signal output to said ~~wireless communication interface~~ first processor.

Express Mail Certificate No. ____

Application No. 09/987,458

Preliminary Amendment Dated ____

26. (Previously Amended) An apparatus as recited in claim 24 wherein said roller is moveable in two degrees of freedom.

27. (Previously Amended) An apparatus as recited in claim 26 wherein said two degrees of freedom comprise a rotary degree of freedom and a translatory degree of freedom.

28. (Previously Amended) An apparatus as recited in claim 23 further comprising a local display screen.

29. (Previously Amended) An apparatus as recited in claim 23 further comprising a microphone.

30. (Currently Amended) An apparatus as recited in claim 23 wherein said ~~host~~ first processor is included in a video game console.

31. (Currently Amended) An apparatus as recited in claim 23 wherein said ~~host~~ first processor is included in a computer.

32. (Currently Amended) An apparatus as recited in claim 23 wherein said ~~host~~ first processor is included in a Web-access device.

Express Mail Certificate No. ____

Application No. 09/987,458

Preliminary Amendment Dated ____

33. (Currently Amended) An apparatus as recited in claim 23 wherein said ~~host~~ first processor is included in an electronic device.

34. (Currently Amended) An apparatus as recited in claim 23 further comprising a ~~local~~ second processor, separate from said ~~host~~ first processor and ~~operative~~ operable to communicate with said ~~host~~ first processor.

Claims 35-57 (Canceled)

58. (Previously Added) An apparatus as recited in claim 28 wherein said local display screen further comprises a touch-sensitive surface.

59. (New) An apparatus as recited in claim 23 wherein said sensor is operable to detect an amount of said deviation of said manipulandum from said position and to output a second sensor signal that correlates with said amount of said deviation of said manipulandum from said position, said first processor operable to receive said second signal.

60. (New) An apparatus as recited in claim 23 wherein said first processor is operable to correlate a value with said position of said manipulandum in a position

Preliminary Amendment Dated ____

control mapping mode and to control a rate of change of said value in a rate control mapping mode.

61. (New) An apparatus as recited in claim 60 wherein said first processor is operable to control said tactile feedback to said manipulandum in said rate control mapping mode.

62. (New) An apparatus as recited in claim 60 wherein said actuator is operable to output a force detent during a displacement of said manipulandum in said position control mapping mode.

63. (New) An apparatus as recited in claim 60 wherein said rate of change correlates with a displacement of said manipulandum with respect to said position of said manipulandum.

64. (New) An apparatus as recited in claim 63 wherein said first processor is operable to control said position of said manipulandum in said rate control mapping mode.

Application No. 09/987,458

Preliminary Amendment Dated ____

65. (New) An apparatus as recited in claim 64 wherein said first processor is operable to control a biasing force applied to said manipulandum in a direction toward said position in said rate control mapping mode.
66. (New) An apparatus as recited in claim 23 further comprising a wireless communication interface operable to communicate with said first processor.
67. (New) An apparatus as recited in claim 23 wherein said deviation comprises a distance.
68. (New) An apparatus as recited in claim 23 wherein said deviation comprises a direction.
69. (New) An apparatus as recited in claim 23 wherein said deviation comprises a rate of change.
70. (New) An apparatus as recited in claim 23 wherein said deviation is measured substantially in real-time.

Express Mail Certificate No. ____

Application No. 09/987,458

Preliminary Amendment Dated ____

71. (New) An apparatus comprising:

a manipulandum operable to be displaced in at least one degree of freedom;

a sensor operable to detect a motion of said manipulandum and to output a first signal that correlates with a detected motion of said manipulandum;

an actuator operable to output a force to said manipulandum that correlates with said first signal;

a first processor operable to control said actuator and to receive said first signal from said sensor; and

a second processor in communication with said first processor, said second processor operable to control said first processor.

72. (New) An apparatus as recited in claim 71 wherein said manipulandum is movable in two degrees of freedom, said two degrees of freedom comprising a rotary degree of freedom and a translatory degree of freedom.

73. (New) An apparatus as recited in claim 71 wherein said sensor is operable to detect a first position of said manipulandum, a second position of said manipulandum, and an amount of a deviation between said first and second positions and to output a second signal that correlates with said first position, a third signal that correlates with said second position, and a fourth signal that correlates with said amount of said

deviation, said first processor operable to receive said second, third, and fourth signals.

74. (New) An apparatus as recited in claim 73 wherein said first processor is operable to correlate a value with said first position of said manipulandum in a position control mapping mode and to control a rate of change of said value in a rate of control mapping mode.

75. (New) An apparatus as recited in claim 74 wherein said first processor is operable to control said force to said manipulandum in said rate control mapping mode.

76. (New) An apparatus as recited in claim 74 wherein said actuator is operable to output a force detent during a displacement of said manipulandum in said position control mapping mode.

77. (New) An apparatus as recited in claim 74 wherein said rate of change correlates with a displacement of said manipulandum with respect to said first position of said manipulandum.

Application No. 09/987,458

Preliminary Amendment Dated ____

78. (New) An apparatus as recited in claim 77 wherein said first processor is operable to control said first position of said manipulandum in said rate control mapping mode.

79. (New) An apparatus as recited in claim 78 wherein said first processor is operable to control a biasing force applied to said manipulandum in a direction toward said first position in said rate control mapping mode.
